

Title : Traceability of the decision process: an important issue for Decision Deck

Abstract : In this session we will :

- introduce the traceability concept in the decision process and underline its strategic importance in an global integrated dematerialized business word,
- illustrate the 4 traceability levels: persistency, historization, logging and causality,
- emphasize some critical collaborative and distributed workflow aspects
- announce methodological and technical challenges for d2: intrusion versus evolution
- conclude with a causal community requirement game
