The RDA's Provenance Patterns WG

Group's Charter

The RDA's Provenance Patterns WG is aiming to characterize and consider:

1. Common provenance Use Cases
2. Provenance design patterns

Deliverables

1. A provenance use case recording system – <http://patterns.promsns.org>
2. An initial collection of provenance use cases, elicited from other interest groups and working groups
3. Documented provenance design patterns generalised from use cases
4. A taxonomy for provenance use cases
5. Recommendations for aligning new use cases with provenance design patterns
6. A sustainability plan for ongoing data and document custodianship

This WG will establish a series of resources of on-going benefit to the provenance research community:

- a collection of categorized, web-referenceable, persistent, provenance Use Cases
- current best provenance practices (Patterns)
- a listing of provenance-implementing systems and organisations.

Get involved

We'd love to have provenance researchers and implementers join the group to share their Use Cases, Patterns & Implementations.

Join the RDA and the WG, contact the co-chairs: Nicholas Car, David Dubin, Paolo Missier
