The first contribution to this issue is *Real-time Optical Dart Detection and Scoring Algorithm for Steel Tip Dartboards* by Ervin Domazet. Automatic scoring for Darts has been addressed with many quite different techniques ranging from microphone triangulation to using the Hough transformation. After recalling the earlier work of Boldyrev, Domazet proposes several improvements to the system developed by Boldyrev. The improvements deal with the calibration, the camera positions and angles, the detection and the parallelization. The resulting system has a high accuracy and will be of practical use for Darts players.

The second contribution to this issue is *Second Player's Cannot-Lose Strategy for Cylinder-Infinite-Connect-Four with Circumference 11* by Yoshiaki Yamaguchi. At Cylinder-Infinite-Connect-Four, it was proved that White can prevent Black from winning for all circumferences except circumferences 6 and 11. This paper details a strategy for White for circumference 11.

At the end of this issue Hiroyuki Iida, Jonathan Schaeffer and I-Chen Wu report on *The 2022 Computer Olympiad*.

More information on some tournaments of the 2022 Computer Olympiad are also given in the following notes:

*VERYLONGCAT won the Mahjong tournament* by Shih-Chieh Tang, Jr-Chang Chen and I-Chen Wu.

*JadeHare Wins Honeymoon Bridge Tournament in ICGA 2022* by Chieh-Yu Chen and Shun-Shii Lin.

*Monte\_Alpha Wins the EinStein Würfelt Nicht Tournament* by Chih-Hung Chen, Sin-Yi Chiu, Shun-Shii Lin and Jr-Chang Chen.

*CLAP\_CDC wins Chinese dark chess tournament* by Chu-Hsuan Hsueh and Jr-Chang Chen.

The last note is the SSDF rating list of May 2022.
