

Problem formulation

Nadia Papamichail

nadia.papamichail@mbs.ac.uk

Cost IC0602 International Doctoral School
Applying Decision Analysis to Real Problems
University of Manchester

10 -13 April 2011

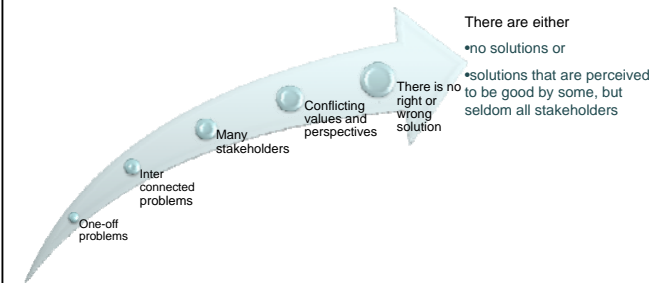

1

Learning Objectives

- 1 • Define what we mean by 'wicked problems'
- 2 • Introduce a range of soft modelling techniques
- 3 • Discuss how to use these techniques to formulate decision problems

2

'Wicked' problems/ Messes

(Courtney, 2001; Ackoff, 1974)

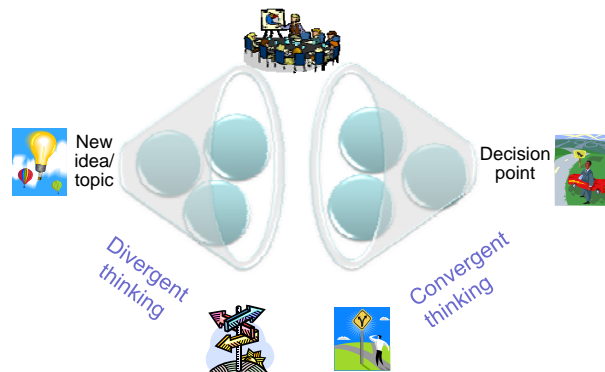

3

Building an understanding

- How can we catalyse the process of 'giving shape' to the issues and relevant data?
- How can we share and record that understanding?
- Process:
 - open brainstorming and discussion
 - focus on objectives
 - draw together issues into several perspectives and frame problem
 - build model(s) and conduct analyses.

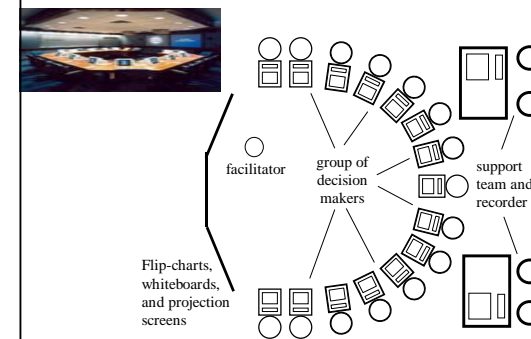

4

Divergent vs. convergent thinking

5

Electronic Brainstorming

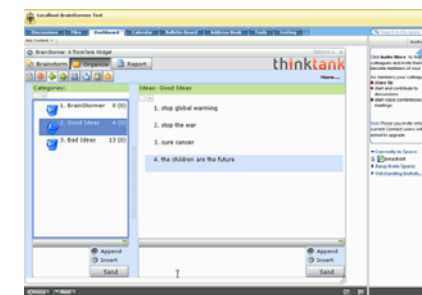

7

Brainstorming

- Discuss issues and concerns in a group
- List uncritically all the issues
- One idea triggers another
- All ideas and contributions have equal value
- Streams of ideas are also of value
- Write up on whiteboard – or Post-its

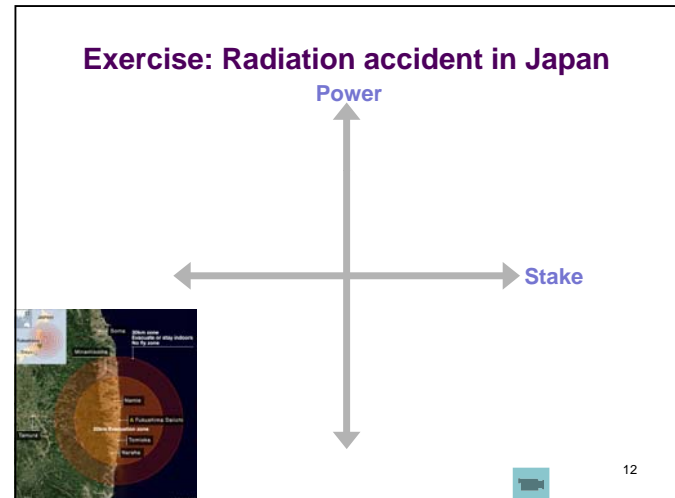

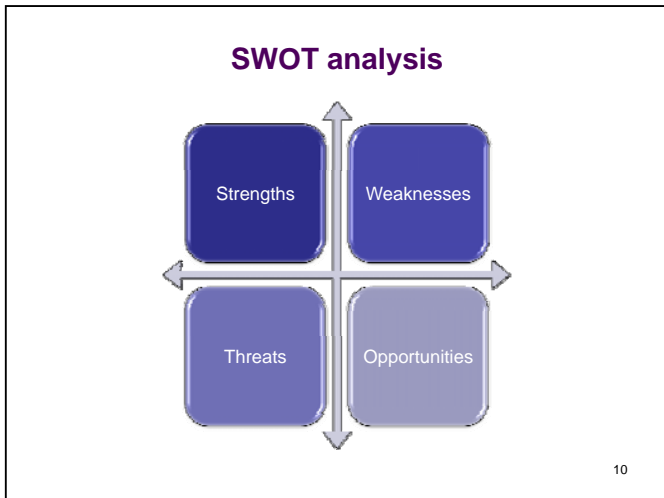

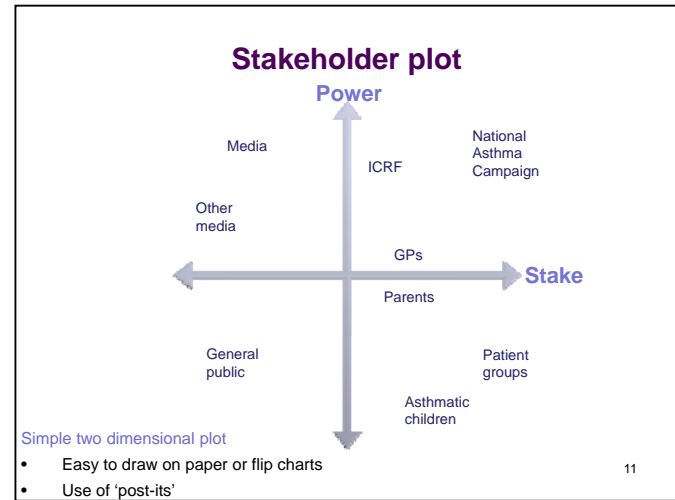

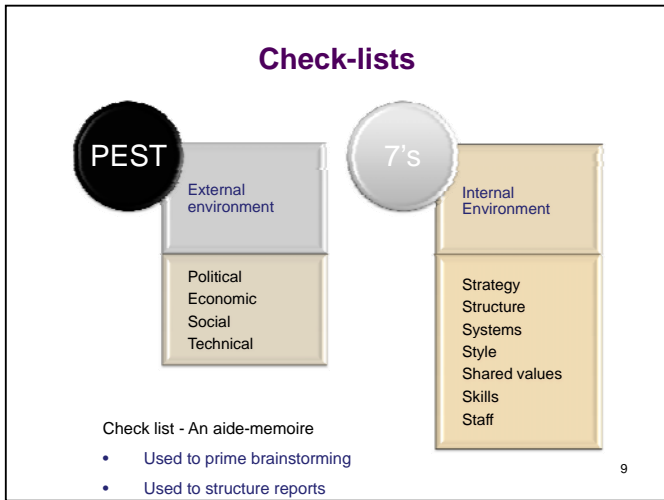

6

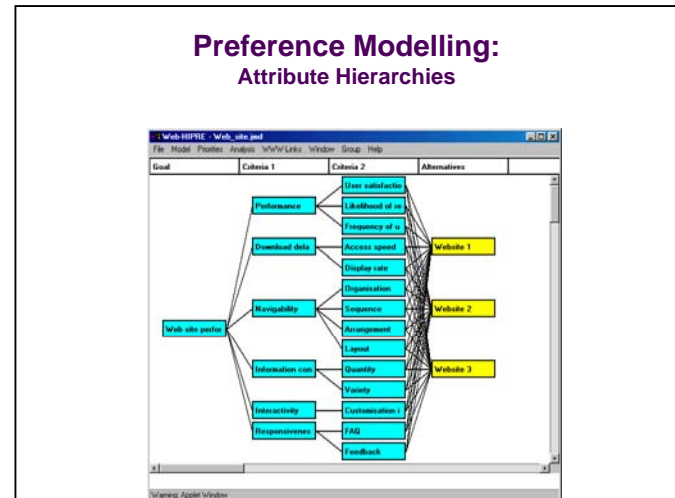

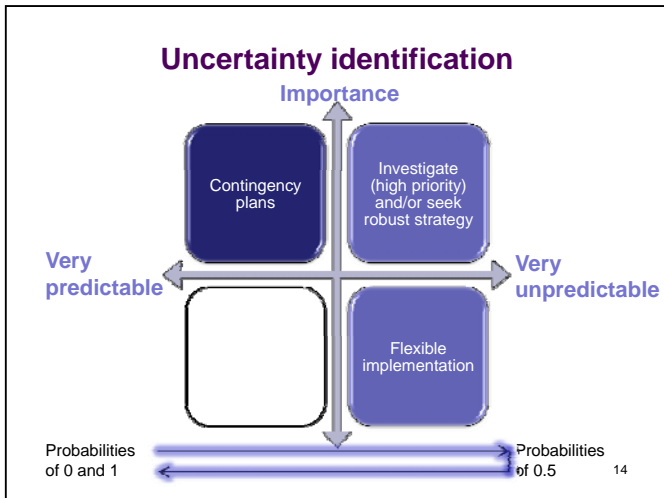

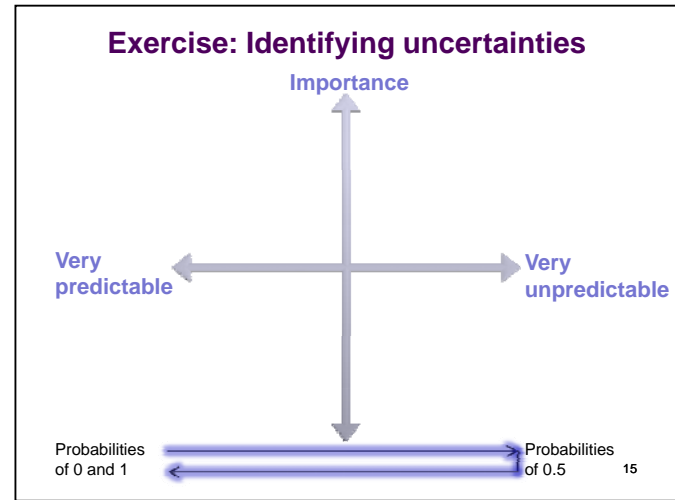

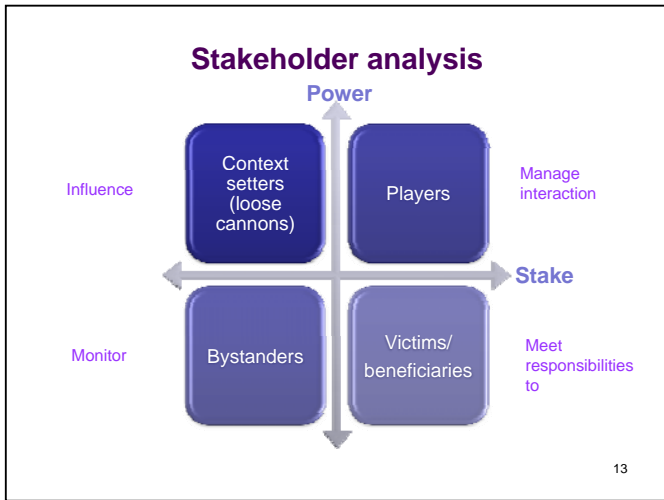

Electronic Brainstorming
